```
(* ср 1: норма заданная многоугольником *)
(*постройте многоугольник W : выпуклый , симметричнй относительно осей координат *)
(* вершины которого лежащие в первом квадранте входят список заданных точек*)
(* вершины которого содержат максимально возможное число из заданных точек*)
(* вычислите W-(-17/12, 19/5) нрому точки *)
(* найдите максимум и минимум (a^2+b^2)^(1/2) при условии ||(a,b)||_W=1*)
